WebVault

Introduction

Making backup copies of your computer data can often be difficult, time consuming and expensive. Our secure internet backup service is a software based solution that makes reliable backup of your important personal or business information easy! Most backup schemes depend on user intervention as well as costly devices and media. Our solution can perform regular backup of your data via the internet, safely, securely and automatically. Your data is available to restore any time you need it, even online from another computer!

Features and Benefits

- Use any broadband internet connection
- Suitable for any amount of data
- Minimal or no user intervention
- No backup hardware or storage media required
- Data is encrypted with your own password
- Backup information is stored offsite
- Differential and incremental backups
- Daily email reports of backup activity
- Rollback and restore to a particular point in time
- Compatible with all versions of Microsoft Windows, MacOS, Linux and Novell
- Backup Microsoft Exchange, SQL Server, Mysql, Oracle and Lotus

Pricing

Pricing for our secure internet backup service is based on your compressed data storage requirements. You can choose from one of the following rate plans or if you have larger storage requirements please call us for special pricing.

5/10GB Storage	10/20GB Storage	20/40GB Storage	30/60GB Storage
$33/month	$55/month	$88/month	$110/month
$65 License Fee	$65 License Fee	$65 License Fee	$65 License Fee
$88 Seed Load (optional)	$110 Seed Load (optional)	$165 Seed Load (optional)	$165 Seed Load (optional)

* License fees are a once-off setup cost. Optional $11 license fee applies to brick-level Microsoft Exchange backup feature (per mailbox).
* Pricing does NOT include on-site installation (optional if required). * Pricing is quoted inclusive of GST and is subject to change.
* Service is subject to our standard terms & conditions - available on our website.

Frequently Asked Questions

1. Where is my backup data located and how is it secured?
Backup information is stored in our world-class data centre located in Perth, Western Australia. Your data can be encrypted with your own personal password so that not even we can access it!

2. How do I calculate my backup storage requirements?
In most cases you require 1/2 the amount of backup storage as you have actual data. For example, if you have 10GB of data to backup you will only require 5GB of storage.

3. How long will it take to backup my data?
Backup time will depend entirely on how much data you are protecting and the speed of your internet connection. The initial backup time may be long, however subsequent backup tasks may only take several minutes. To speed up your initial backup you can optionally "seed load" your data by copying the encrypted information to physical media and sending it to us for pre-loading at the data centre.
